

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

---

1. (Currently Amended) A system comprising:
  - (a) an information appliance having a graphical user interface and capable of retrieving content via a worldwide network; and
  - (b) a first device capable of being operably connected with said information appliance, said first device comprises at least one of the following: a television, a cable box, a satellite receiver, a CD player, a DVD player, a radio tuner, a video game player, a VCR, and a security system; wherein said information appliance is capable of analyzing an audiovisual media delivered by said first device and automatically creating a media channel in a format acceptable to a user, said media channel comprising information associated with said audiovisual media and content retrieved from said worldwide network relating to said audiovisual media, said media channel being accessible for display via said graphical user interface, said audiovisual media comprises at least one of the following: audio content, musical content, video content, photographic content, and a video game.
2. (Original) The system as claimed in claim 1, wherein said information appliance is capable of detecting the initial presence of said first device and automatically creating a first device channel comprising information associated with said first device, said first device channel being displayable on said information appliance via said graphical user interface.
3. (Original) The system as claimed in claim 2, wherein said information appliance is capable of placing said media channel as a sub-directory of said first device channel.
4. (Previously Amended) The system as claimed in claim 1, wherein said worldwide network is the Internet.

5. (Original) The system as claimed in claim 1, further comprising a second device capable of being operably connected to said information appliance.

6. (Original) The system as claimed in claim 5, wherein said graphical user interface comprises a second device channel for said second device.

---

7. (Canceled)

8. (Canceled)

---

9. (Original) The system as claimed in claim 2, wherein said first device channel comprises an aggregation of content comprising at least one of the following: information regarding the manufacturer of said first device, products available for said first device, instructions for utilization of said first device, and information relating to activities occurring on said first device.

10. (Original) The system as claimed in claim 2, wherein said media channel and said first device channel are updated upon subsequent utilization of said first device.

11. (Currently Amended) A method of automatically generating channels, comprising the steps of:

- (a) configuring an information appliance suitable for searching a worldwide network;
- (b) formatting said information appliance to include a graphical user interface;
- (c) operably connecting a first device to said information appliance;
- (d) analyzing audiovisual usage on said device; and
- (e) searching said worldwide network for information associated with an audiovisual media delivered by said first device, said first device comprises at least one of the following: a television, a cable box, a satellite receiver, a CD player, a DVD player, a radio tuner, a video game player, a VCR, and a security system; wherein said information appliance is capable of automatically placing information associated with audiovisual media delivered by said first device and content retrieved from said worldwide network relating to said audiovisual media into a media channel acceptable to a user for display via said graphical user interface, said

audiovisual media comprises at least one of audio, video, music, a video game, and photography.

12. (Previously Amended) The method as claimed in claim 11, further comprising the steps of:

- (a) detecting an initial presence of said first device; and
- (b) searching said worldwide network for information associated with said first device; wherein said information appliance is capable of automatically placing said information associated with said first device into a device channel for display via said graphical user interface.

C2 13. (Original) The method as claimed in claim 12, wherein said information appliance is capable of placing said media channel as a sub-directory of said first device channel

14. (Previously Amended) The method as claimed in claim 11, wherein said worldwide network is the Internet.

15. (Original) The method as claimed in claim 11, further comprising a second device capable of being operably connected to said information appliance.

16. (Original) The method as claimed in claim 15, wherein said graphical user interface comprises a second device channel for said second device.

---

17. (Canceled)

18. (Canceled)

---

C3 19. (Original) The method as claimed in claim 12, wherein said first device channel comprises an aggregation of content comprising at least one of the following: information regarding the manufacturer of said first device, products available for said first device, instructions for utilization of said first device, and information relating to activities occurring on said first device.

20. (Original) The method as claimed in claim 12, wherein said media channel and said first device channel are updated upon subsequent utilization of said first device.

21. (Currently Amended) A program of instructions storable on a medium readable by an information appliance capable of enabling the information appliance to execute steps for generating a channel, the steps comprising:

(a) analyzing an audiovisual media delivered by a first device operably connected to an information appliance, said first device comprises at least one of the following: a television, a cable box, a satellite receiver, a CD player, a DVD player, a radio tuner, a video game player, a VCR, and a security system;

(b) searching a worldwide network for information associated with said audiovisual media delivered by said first device;

(c) creating a graphical user interface; and

(d) organizing information associated with said audiovisual media and content retrieved from said worldwide network relating to said audiovisual media into a media channel in a format acceptable to a user for display via said graphical user interface, wherein said audiovisual media comprises at least one of audio, video, music, video games, and photography.

22. (Previously Amended) The program of instructions as claimed in claim 21, further comprising the steps of:

(a) detecting an initial presence of said first device;

(b) searching said worldwide network for information associated with said first device; and

(c) organizing information associated with said first device into a first device channel for display via said graphical user interface.

23. (Original) The program of instructions as claimed in claim 22, wherein said information appliance is capable of placing said media channel as a sub-directory of said first device channel.

24. (Original) The program of instructions as claimed in claim 21, wherein said network is the Internet.

C<sup>3</sup>  
25. (Original) The program of instructions as claimed in claim 21, further comprising a second device capable of being operably connected to said information appliance.

26. (Original) The program of instructions as claimed in claim 25, wherein said graphical user interface comprises a second device channel for said second device.

---

27. (Canceled)

28. (Canceled)

---

C<sup>4</sup>  
29. (Currently Amended) The program of instructions ~~method~~ as claimed in claim 22, wherein said first device channel comprises an aggregation of content comprising at least one of the following: information regarding the manufacturer of said first device, products available for said first device, instructions for utilization of said first device, and information relating to activities occurring on said first device.

30. (Currently Amended) The program of instructions ~~method~~ as claimed in claim 22, wherein said media channel and said first device channel are updated upon subsequent utilization of said first device.

---

31. (Previously Canceled)

---

32. (Previously Added) The system as claimed in claim 2, wherein said information appliance is configured to create the first device channel in response to detecting the initial presence of said first device.

C<sup>5</sup>  
33. (Previously Added) The system as claimed in claim 32, wherein said information appliance is configured to create the media channel in response to analyzing the audiovisual media delivered by said first device.

34. (Previously Added) The system as claimed in claim 33, wherein said information appliance is capable of placing said media channel as a sub-directory of said first device channel.

C<sup>5</sup>  
35. (Previously Added) The method as claimed in claim 12, further comprising creating the device channel in response to detecting the initial presence of said first device.

36. (Previously Added) The method as claimed in claim 35, further comprising creating the media channel in response to analyzing the audiovisual media delivered by said first device.

37. (Previously Added) The method as claimed in claim 36, wherein said information appliance is capable of placing said media channel as a sub-directory of said first device channel.

---

38. (New) The system as claimed in claim 1, wherein the first device is configured to be capable of making a detection of an audiovisual media event and communicating the detection to the information appliance.

C<sup>6</sup>  
39. (New) The system as claimed in claim 38, wherein said information appliance is capable of analyzing the audiovisual media delivered by said first device and automatically creating the media channel in response to the detection of the audiovisual media event.

40. (New) The system as claimed in claim 38, wherein the audiovisual media event comprises placement of the audiovisual media into the first device.

41. (New) The method as claimed in claim 11, wherein the first device is configured to be capable of making a detection of an audiovisual media event and communicating the detection to the information appliance.

42. (New) The method as claimed in claim 41, wherein said information appliance is capable of analyzing the audiovisual media delivered by said first device and automatically creating the media channel in response to the detection of the audiovisual media event.

43. (New) The method as claimed in claim 41, wherein the audiovisual media event comprises placement of the audiovisual media into the first device.

44. (New) The program of instructions as claimed in claim 21, wherein the first device is configured to be capable of making a detection of an audiovisual media event and communicating the detection to the information appliance.

45. (New) The program of instructions as claimed in claim 44, wherein said information appliance is capable of analyzing the audiovisual media delivered by said first device and automatically creating the media channel in response to the detection of the audiovisual media event.

46. (New) The program of instructions as claimed in claim 44, wherein the audiovisual media event comprises placement of the audiovisual media into the first device.
